

Investor Summary

A proprietary precision peptide platform spanning therapeutics, diagnostics, and oncology.

COMPANY OVERVIEW

EndoCyclic Therapeutics, Inc. is a clinical-stage precision medicine company in Irvine, California. Founder and CEO Dr. Tanya Petrossian, PhD leads the company as it advances non-hormonal precision peptide programs for endometriosis and oncology.

The platform combines pH-mediated activation with selective uptake by diseased tissue through a proprietary endocytic pathway. It is designed to act in diseased tissue while avoiding hormones, surgery, and systemic toxicity.

Phase 1 current stage	ENDO-205	190M affected worldwide	plus women	\$200B economic burden	annual US	10 grant score	perfect NIH
---------------------------------	-----------------	-----------------------------------	-------------------	----------------------------------	------------------	--------------------------	--------------------

ENDOMETRIOSIS CONTEXT

Scale and delay	Market and care gap
10% of reproductive-age women globally 8-year average diagnostic delay - Leading cause of infertility and chronic pelvic pain	\$180B-\$250B global treatment-market potential, based on a McKinsey estimate - Current therapies are largely hormone-based and symptomatic - Current therapies do not eliminate lesions or modify disease biology

Lead program: ENDO-205 is a first-in-class, non-hormonal precision peptide therapeutic with FDA IND Allowance (2026), now in Phase 1.

EndoCyclic Therapeutics

FOUR-PROGRAM DEVELOPMENT PORTFOLIO

Pipeline

One selective platform extends across endometriosis and oncology, with therapeutic and diagnostic programs in each area.

CURRENT DEVELOPMENT STAGES

Program	Indication	Stage	Development focus
ENDO-205	Endometriosis therapeutic	Phase 1	First-in-class, non-hormonal precision peptide therapeutic; FDA IND Allowance (2026)
FemLUNA™	Non-invasive endometriosis imaging	IND-enabling	Targeted imaging agent designed to detect superficial and sub-millimeter lesions
ENDO-995	Malignant solid tumors	Pre-clinical	Investigational tumor-selective, non-hormonal therapeutic peptide
ENDO-311	Solid tumor diagnostics	Pre-clinical	Investigational targeted imaging agent paired with ENDO-995

LEAD-PROGRAM TRANSITION

01	Pre-clinical findings	Demonstrated elimination of endometriosis lesions and associated inflammation; no dose-limiting toxicities in GLP toxicology studies.
02	IND Allowance	FDA IND Allowance achieved in 2026.
03	Phase 1	First-in-human clinical study in healthy pre-menopausal women of reproductive age.
04	Fast Track	Filing underway.

ENDO-205 is designed as a short-course, disease-modifying treatment for endometriosis.

EndoCyclic Therapeutics

MILESTONES AND INSTITUTIONAL RECORD

Milestones and next conversation

The records below distinguish regulatory progress, institutional recognition, and company-reported relationships.

SELECTED MILESTONES

Regulatory and development

- FDA IND Allowance for ENDO-205 (2026)
- ENDO-205 in Phase 1
- Fast Track filing underway
- FemLUNA™ in IND-enabling development

Recognition and relationships

- NIH Commercialization Readiness Pilot grant score of 10
- Multiple NICHD awards
- NIH SBIR Success Story
- UCLA partnership (company-reported)
- NIH RADx Tech
- White House recognition (company-reported)

PLATFORM REACH

The proprietary precision peptide platform spans therapeutics, diagnostics, and oncology. EndoCyclic is expanding into additional women's health indications and oncology.

EndoCyclic is a founding member of the Milken Institute Women's Health Network.
