

Investor Summary

Clinical-Stage Precision Medicine | Non-Hormonal | First-in-Class

March 2026 | Confidential

COMPANY OVERVIEW

EndoCyclic Therapeutics, Inc. is a clinical-stage precision medicine company headquartered in Irvine, California. Founded in 2017 by Dr. Tanya Petrossian, PhD, the company is developing first-in-class, non-hormonal therapeutics and diagnostics for endometriosis and oncology using a proprietary precision peptide platform with pH-mediated activation.

The platform enables selective uptake by diseased tissue via a proprietary endocytic pathway, designed to act only in diseased tissue while avoiding hormones, surgery, and systemic toxicity. EndoCyclic is a founding member of the Milken Institute Women's Health Network.

MARKET OPPORTUNITY

- \$180B-\$250B global market potential for endometriosis treatments (McKinsey estimate)
- \$1 trillion annual economic opportunity from closing the women's health gap by 2040 (McKinsey, 2024)
- 10% of reproductive-age women globally - 190M+ affected, leading cause of infertility and chronic pelvic pain
- \$9,500-\$21,000 annual cost per patient, with 65-84% from lost productivity
- 7-9 year average diagnostic delay - patients see an average of 7 providers before diagnosis
- Non-hormonal therapy segment projected CAGR of 13.7%, fastest-growing segment in the market
- Women's health receives just ~2% of health-related VC funding despite massive disease burden
- VC investment in women's health reached \$2.6B in 2024, a 55% YoY increase - momentum accelerating

FUNDING DISPARITY:

Endometriosis research received \$44M (2019-2023) vs. \$1.24B for erectile dysfunction in the same period.

CLINICAL PIPELINE

PROGRAM	INDICATION	STAGE	KEY DIFFERENTIATOR
ENDO-205	Endometriosis (Therapeutic)	Phase 1 / IND Cleared	First-in-class non-hormonal, disease-modifying, short-course precision peptide therapeutic
FemLUNA(TM)	Endometriosis (Diagnostic)	IND-Enabling	First non-invasive diagnostic; detects sub-millimeter lesions missed by current imaging
ENDO-995	Maintenance Therapy	Preclinical	Follow-on to ENDO-205 for sustained disease management
ENDO-311	Colorectal Cancer / Solid Tumors	Preclinical	Oncology expansion of precision peptide platform

MILESTONES & VALIDATION

- > FDA IND Allowance achieved (2026) - ENDO-205 cleared to enter Phase 1 first-in-human clinical study
- > NIH Perfect "10" score on Commercialization Readiness Pilot (CRP) grant from NICHD - rarest possible designation
- > Met all milestones for NIH SBIR Phase I, Phase II, and Phase IIB grants on schedule and within budget
- > Named NIH SBIR Success Story - featured in NICHD Director's Corner
- > Fast Track designation filing underway with FDA
- > No dose-limiting toxicities observed in GLP toxicology studies (preclinical)
- > White House recognition for innovation in women's health
- > Founding member, Milken Institute Women's Health Network
- > Biocom California Life Science Catalyst Award (CEO, 2017)

LEADERSHIP

Tanya Petrossian, Ph.D. - CEO, Founder & Inventor

UCLA Biochemistry; 15+ years peptide therapeutics; LA Entrepreneur in Residence; Biocom Catalyst Award

Melanie Hartsough, Ph.D. - Nonclinical Toxicology

Former FDA reviewer (CBER/CDER); President, American Board of Toxicology

David Lin, Ph.D. - CMC

27+ years pharma regulatory; former FDA acting Division Director (CDER)

Andrea Lukes, MD - Clinical Affairs

Board-certified OB/GYN, FACOG; 90+ clinical trials in women's health

Aileen Ryan, MS - Regulatory Affairs

40+ years regulatory; former Bayer Pharma, Ludwig Institute

Miganush Stepanians, Ph.D. - Biostatistics

Ph.D. Statistics (BU), M.S. Math (MIT); 20+ successful NDAs/MAAs

Frank Fernandez - CFO

Decades of financial leadership in life sciences

INVESTMENT THESIS

First-Mover in a \$180B-\$250B Market

ENDO-205 is the first non-hormonal, disease-modifying therapeutic for endometriosis to reach clinical stage. No approved therapy today eliminates lesions or modifies the underlying disease biology.

Validated Science, De-Risked Path

FDA IND clearance, NIH perfect "10" grant score, and successful completion of all SBIR milestones on time and within budget demonstrate both scientific validity and operational execution.

Platform with Multi-Indication Potential

The proprietary precision peptide platform extends beyond endometriosis into diagnostics (FemLUNA), maintenance therapy (ENDO-995), and oncology (ENDO-311), creating multiple value-creation opportunities.

Massive Unmet Need, Accelerating Tailwinds

190M+ women affected. 8-year diagnostic delay. Current treatments are hormone-based and symptomatic only. VC investment in women's health grew 55% YoY to \$2.6B in 2024. McKinsey projects a \$1 trillion annual economic opportunity from closing the women's health gap.

Experienced, Mission-Driven Team

Leadership includes former FDA reviewers, a board-certified OB/GYN with 90+ clinical trials, regulatory experts with 40+ years of experience, and a founder-CEO with deep domain expertise and personal connection to the disease.

WHY NON-HORMONAL MATTERS

CURRENT STANDARD OF CARE

- Hormone-based (GnRH agonists, oral contraceptives)
- Symptom management only - does not eliminate lesions
- 50%+ recurrence within 1-5 years
- Side effects: bone loss, infertility impact, mood changes

ENDOCYCLIC APPROACH

- + Non-hormonal precision peptide mechanism
- + Designed to eliminate lesions and modify disease
- + Short-course therapy - not lifelong treatment
- + No hormones, no surgery, no systemic toxicity
